

SHAPING EUROPE'S **BLOCKCHAIN** FUTURE

BLOCKSTART STARTUPS DEMO DAY

29 October | 3pm (CET)

Online event 

CIVITTA

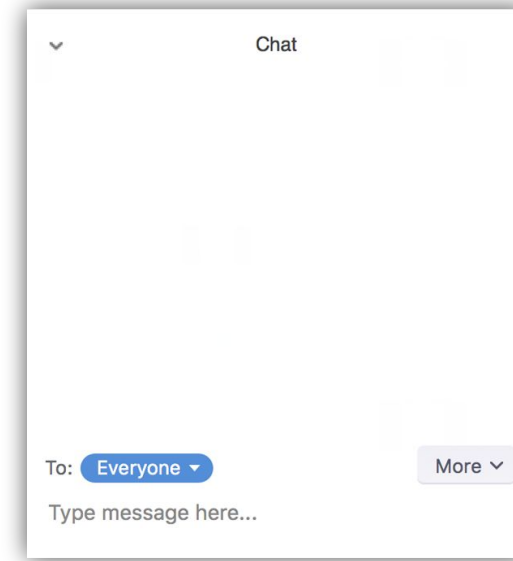

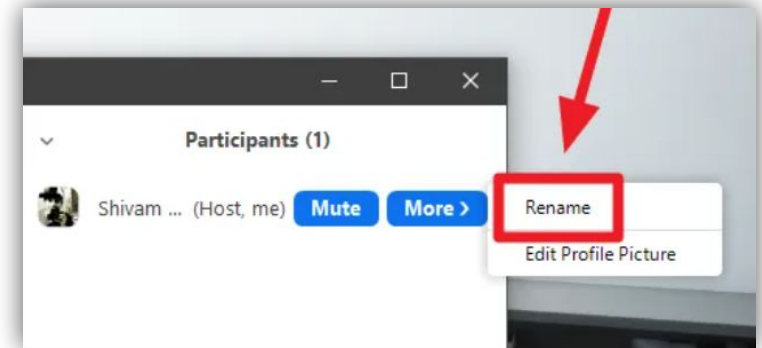

Media partners

Before we start...

- Make sure that you have your microphone and video **turned off** during presentation
- **Rename** yourself to first, last name and entity you represent
- There will be specific slots dedicated to Q&A. If you wish to ask a question, **send a message through the chat**
- Our moderator will select 2/3 questions, depending on the time available

Let's break the ice...

We want to get to know you and what are your expectations!

Agenda

15:05-15:15 | **1 year of BlockStart** | Benjamin Júnior, Bright Pixel

15:15-15:55 | **The current state of blockchain adoption** | Max Lautenschläger, Iconic Holding

15:55-16:25 | **Blockchain startups pitch** | 2bSmart and Datarella

16:25-16:35 | **Are you ready for blockchain?** | Vytautas Černiauskas, CIVITTA

16:35-17:20 | **Blockchain startups pitch** | Infidia, Kedeon and REXS.IO

17:20-17:30 | **Wrap-up and takeaways** | João Fernandes, Bright Pixel

1 year of BlockStart

Benjamin Júnior, Bright Pixel

What is BlockStart?

- BlockStart is a **3-stage intensive mentor-led programme** that aims at fostering blockchain adoption among startups in **retail, fintech** and **ICT** sectors
- Main goal is to facilitate business-focused **partnerships** between DLT/blockchain solution providers and end-user SMEs
- **€795,000** equity free to support **60 tech startups** and **60 SMEs**
- BlockStart is run by **Bright Pixel, CIVITTA** and **F6S**

Who are the target companies?

BlockStart is looking for 2 types of companies:

DLT/blockchain startups
(solution providers)

End-user SMEs
(solution adopters)

What does it offer?

Startups accepted into BlockStart will have access to a variety of perks, including:

Equity-free funding: up to €20,000 for each DLT/blockchain solution providers | up to €4,500 for each end-user SME

Market validation: a 3-stage acceleration programme that helps fine-tune, test and demo the solution with real users

Growth support: access to personalized mentoring, training and additional resources

Network and community: access to clients and potential investors and showcase of the solution

How does it work?

BlockStart's Acceleration Programme

Ideation Kick-off

1 day (26 March)

- 20 DLT startups selected
- Solutions presented to 10 end-user SMEs
- Evaluation by business & technical experts

€1,000 for DLT startups

€1,500 for end-user SMEs

Prototype stage

4 months (Apr-Jul)

- 10 DLT startups selected to further develop their solution towards product/market fit
- BlockStart provides mentorship (virtual meetings)

€15,000 for DLT startups

Pilot stage

2 months (Aug-Oct)

- 5 DLT startups selected
- 20 SMEs to implement the solutions
- **Demo Day** (today!) to promote solutions to potential clients, investors and other startups

€4,000 for DLT startups

€3,000 for end-user SMEs

Open Call #1 in a nutshell

90 DLT startups applications, from 30 countries

57 end-user SMEs applications

Ideation Kick-off event: 73 participants, 30 pitch, 42 meetings

+90 mentoring sessions in Prototype & Pilot stages

Pilot implementations finalized

The current state of blockchain adoption

Max Lautenschläger, Iconic Holding

ICONIC

HOLDING

Frankfurt | Singapore | New York

Executive Management

Patrick Lowry, CPA
CEO & Co-Founder

Patrick, CEO and Managing Partner of Iconic, is also Head of Asset Management at Cryptology Asset Group. He is a venture capitalist and investor with over a decade of financial industry experience. Previously, Patrick was a PwC asset management auditor of clients such as Vanguard and Blackrock. He has worked many years in Private Equity and Venture Capital, most notably with Deutsche Börse, the German Stock Exchange. He holds an MBA and BS in Finance and Accounting and is a Licensed Certified Public Accountant (CPA).

Maximilian Lautenschläger, CAIA
COO & Co-Founder

Max, Co-Founder and Managing Partner of Iconic, is a former management consultant where he advised Fortune 500 companies on digitalization, project management and IT integration. An angel investor himself, he transitioned into Private Equity with a €40-billion AUM group before beginning with a fintech company builder, where he successfully launched several FinTech startups. He holds a BA in International Management, an MBA, is Harvard educated and completed the CAIA designation. Additionally, he serves on the Supervisory board of MLP, Germany's largest independent financial advisory group.

Company Overview

ICONIC HOLDING

Iconic Holding is the parent company of Iconic Funds and Iconic Lab. Headquartered in Frankfurt, Germany, Iconic Holding's investors include FinLab, High-Tech Gründerfonds and Cryptology Asset Group.

ICONIC FUNDS

Iconic Funds, through its subsidiaries, is the issuer of crypto asset index funds and exchange traded products. A joint venture with Cryptology, Iconic Funds is also the operator of a multi-manager crypto hedge fund platform.

ICONIC LAB

Iconic Lab is a venture capital group focused on early stage blockchain and crypto companies. An award-winning accelerator program, Iconic Lab is vertical and geographic agnostic, focusing on seed/pre-seed ventures.

Iconic Lab

Many of the world's most innovative companies are building with blockchain. Iconic Lab invests into and accelerates the top global blockchain and crypto companies to grow and scale faster.

90% investment success rate

10 out of 11 Iconic Lab portfolio companies have gone onto secure follow-on financing in a Series A funding round exceeding €500k after joining Iconic Lab. Over €30M has been raised from Iconic's globally-diverse investor and partner network.

Exclusive dealflow of top startups

Iconic Lab only onboards the most promising blockchain/crypto startups, selecting only 11 out of over 1,500 applications. Iconic Lab enjoys exclusive dealflow from its network and partners and performs the industry's most thorough diligence.

Award-winning accelerator

Iconic Lab was named a top-3 accelerator program in Germany, alongside Techstars. More than investment and network, portfolio companies appreciate the hands-on approach the Iconic Lab team takes to grow and scale their business.

Blockchain and Crypto Venture Portfolio

We invest exclusively into highly disruptive, unique companies in the blockchain and crypto space. Our focus on identifying the most innovative ventures across a wide array of industrial verticals curates an unmatched dealflow spanning AI, Fintech, gaming and more.

The Current State of Blockchain Adoption

Keynote for Shaping Europe's Blockchain Future
October 29, 2020

Max Lautenschläger

Iconic Funds

ICONIC
FUNDS

Blockchain Evolution

Bitcoin a.k.a. Blockchain 1.0

Bitcoin is the world's hardest money and fiat currency hedge

Bitcoin is argued by many to be the world's hardest form of money given its inherently deflationary nature. Bitcoin's stock-to-flow model accurately charts its historical performance with upcoming halvings expected to have profound pricing impacts.

picture source: lookintobitcoin.com

Bitcoin returns are uncorrelated to those of traditional assets

Many studies have proven crypto is uncorrelated to traditional asset classes. While all assets have short bouts of correlation in short time frames, crypto has always held its position as being uncorrelated to traditional markets for over a decade.

picture source: ABRA

Next Generation Blockchains

Smart Contracts

While the first blockchains were designed to transfer value, new protocols enable complex transactions

dApps

With blockchains becoming more scalable, whole applications are built leveraging the decentral infrastructure

Smart Oracles

IoT, NFC or other technologies are used as trusted data feeds, which verify data before distributed on-chain

Use Cases

Many blockchains offer much more use cases besides finance like utilities, data protection, real estate and identity

Decentralized Finance

While Bitcoin was designed as a peer-to-peer payment system, next gen blockchains are the backbone of DeFi

Private vs. Public

There are private (e.g. Hyperledger) and public (e.g. Ethereum) protocols which each serve different purposes

Smart Contracts

Smart contracts are a critical component of many platforms and applications being built using blockchain or distributed ledger technology, it's a computer code that automatically executes all or parts of an agreement on blockchain.

Automated Execution

If the parties have indicated, by initiating a transaction, that certain parameters have been met, the code will execute the step triggered by those parameters.

Code is Law

Human intervention is not required once the smart contract has been deployed and is operational. This reduces the execution/enforcement costs of the contracting process.

Complexity

At present, the input parameters and the execution steps for a smart contract need to be specific and objective. In other words, if "x" occurs, then execute step "y."

Native Payment

In the case of the Ethereum blockchain, smart contracts are executed on the Ethereum Virtual Machine (EVM). This payment, made through ETH, is known as gas.

Legally binding

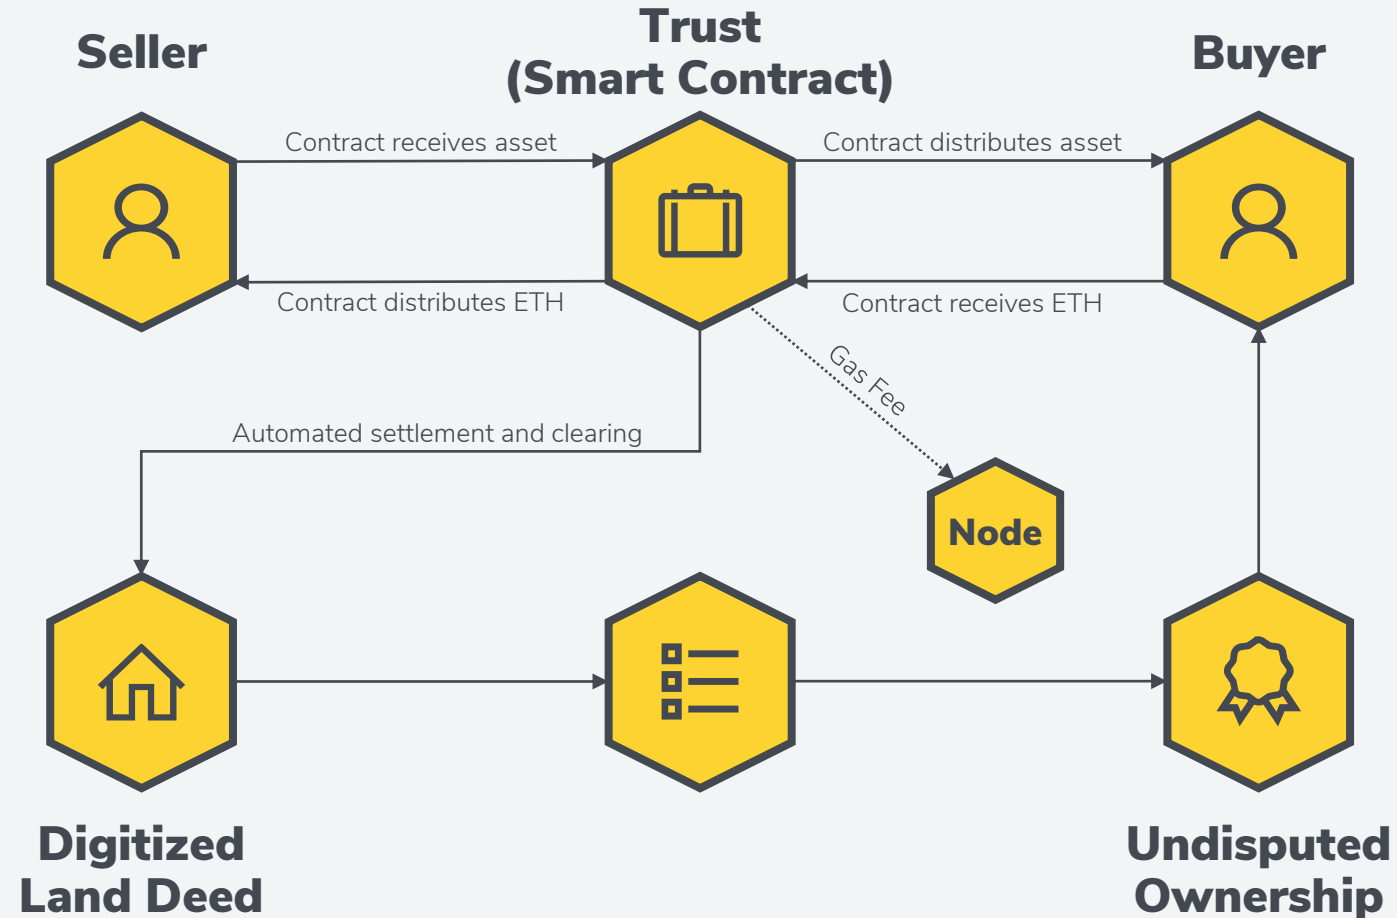

Although, certain contracts must be in writing, agreements do not always need to be in writing to be held enforceable. Thus, many code-only smart contracts will be enforceable

Smart Oracles Dilemma

Many smart contract-proposed use-cases assume that the smart contract will receive information or parameters from resources that are not on the blockchain itself

Smart Contracts in Real Estate

Smart Oracles

Oracles feed the smart contract with external information that can trigger predefined actions of the smart contract. Such a condition could be any data, like weather temperature, successful payment, or price fluctuations. The main challenge with oracles is that people need to trust these outside sources of information, whether they come from a website or a sensor.

Hardware Oracles are sensors integrated with tangible physical objects. Primary examples would be in supply chain tracking with the use of RFID tags for feeding data like environmental conditions of products to the blockchain.

Software Oracles are the most common form that pull data from third-party sources such as web APIs and can include real-world information like flight statuses and weather data.

Consensus Oracles represent a step towards decentralized oracles and rely on aggregating data from several oracles with proprietary methods for determining their authenticity and accuracy.

Blockchain Adoption and Use Cases

Business Adoption

The business value-add of blockchain will exceed \$3.1 trillion by 2030, according to a study by Gartner

The majority of manufacturers and financial service companies view blockchain as a top-5 critical priority (Deloitte)

Inexorable Growth

\$7.5 trillion of financial assets will be stored on blockchain by 2027, according to a survey by the World Economic Forum

Blockchain-as-a-Service industry growth with a CAGR of approximately 70% between 2019 and 2024

Real World Applications

Blockchain is changing the mindset of businesses and governments as we know it. The sheer number of applications of the technology makes it next to impossible to list all of them, but here are some of the most interesting examples.

Financial Services

Barclays has launched a number of blockchain initiatives involving tracking financial transactions, compliance and combating fraud.

Supply Chain

Coke One North America (CONA), the tech firm that manages Coca Cola's bottlers, is using a blockchain solution developed by German software firm SAP to manage its supply chain.

Healthcare

Gem is working with the Centre for Disease Control to put disease outbreak data onto a blockchain which will increase the effectiveness of disaster relief and response.

Identity

REMME is a decentralized authentication system which aims to replace logins and passwords with SSL certificates stored on a blockchain.

Government

The Estonian government has partnered with Ericsson on an initiative involving creating a new data center to move public records onto the blockchain

Retail

OpenBazaar is an attempt to build a decentralized market where goods and services can be traded with no middle-man.

Billion \$ companies building in crypto

Many of the world's largest and most successful companies are building on crypto and blockchain technology. As they continue to build, and users adopt their applications and payment methods, individual crypto's values increase through increased usage.

Ethereum

XRP

EOS

Stellar

Iota

Tokenization of Assets

What is Tokenization?

Modern Securitization

The tokenization of assets refers to the process of issuing a blockchain token that digitally represents a real, tradable asset - in many ways similar to the traditional process of securitization, with a modern twist.

Digital Representation

A token acts as a digital representation of an asset, which could be a share of a company, a piece of real estate, 0.1% of a Picasso painting or a participation in an investment fund.

Tokenized securities

The tokenization of all financial instruments and tangible assets will occur over the next decade. Standard valuation practices apply.

Equity

Tokenized shares of companies
Iconic Shares are tokenized

Debt

Tokenized corporate and gov't debt
Daimler \$100M bond issue on ETH

Real Estate

Tokenized, fractionalized holdings
Fundament tokenized a \$200 building

Commodities

Gold, silver and other precious metals
Tether Gold, Anthem Gold

Collectibles

Art, cars, memorabilia
William Shatner doll on Mattereum

Investment Vehicles

Alternative funds and vehicles
Securitize.io tokenizing funds

” 100 % of the stocks and bonds trading on Wall Street today **COULD BE TOKENIZED** and in 5 years [...] they **WILL BE TOKENIZED**

Robert Greifeld - **Former Chairman & CEO of Nasdaq** | 2018

\$508 Trillion

Total Crypto Market Cap

In a tokenized economy, all global assets will be stored on blockchain. Formerly illiquid asset classes such as art, real estate and venture capital will be trading against liquid asset classes, such as equities and debt, in a completely fungible, transparent and truly global marketplace.

All global assets will be **Crypto Assets**

Financial Assets

such as Equities, Debt
& Derivatives

Real World Assets

such as Real Estate, Arts
& Commodities

High Cost of Trust

Every day, billions are spent to create trust through the use of intermediaries. Even though we don't perceive our financial system as inefficient and it always "works", it would be improved drastically through the use of blockchain technology.

Buyers & Sellers

Institutional asset managers and retail individuals will be matched to transact directly with each other in a peer-2-peer network

Settlement & Clearing

Centralized processing systems that settle cash and clear trades between parties are not needed since both functions are native to blockchain

Exchanges

"Trading floor" exchanges such as the NYSE or digital exchanges such as the NASDAQ will be plugged into blockchain technology

Broker

Stockbrokers who place and execute trades for clients on traditional or digital exchanges are not needed through the blockchain

Custodians

Safekeeping of financial assets or record keeping of a ledger of assets will be completely digital and store cryptoassets in wallet infrastructures

Auditors

Audit firms become more technology driven due to crypto's transparency, automating many audit procedures to provide investor assurances

Fractionalized and Fungible

In a tokenized market, every asset is fractionalized up to the 18th decimal, enhancing its tradability against other assets. Tokenization removes any need for traditional fiat currencies as a medium of exchange between assets.

Cryptocurrencies

Bitcoin, Ethereum, tokens and other native crypto assets

CBDCs

Central bank issued and gov't backed digital currencies

Art and exotics

Illiquid assets such as arts and exotic cars or other assets

Financial instruments

Company stocks, bonds and other financial instruments

Real estate

Real estate and other real-world, tangible assets

Commodities

Gold, silver and precious metals. Oil and commodities

Blockchain Venture Capital

Deals held steady while funding fell

Annual VC-backed deals and financing, 2015 – 2019 (\$M)

Venture Capital is still your best chance

Deal count by investor type, 2015 – 2019

Most Active Blockchain VCs in 2019

Rank	Investor	Select Investments in 2019
1	 NGC NEO GLOBAL CAPITAL	 VEGA  Dapix  Cere Network  MultiVAC  CoinFLEX  NYM  marlin protocol

Blockstart: Public Presentation Track & Trust

October 29th, 2020

01110
DATARELLA

“How can Blockchain technology make the humanitarian supply chain more efficient?”

Kick-Off Workshop in London
November 2018

CHALLENGES OF THE SUPPLY CHAIN

The main problems stakeholders within Supply Chains are facing:

- Lack of end-to-end overview of supplies
- High logistics costs
- Huge amounts of paperwork and custom formalities
- No access to accurate information
- Lack of transparency resulting in corruption fraud

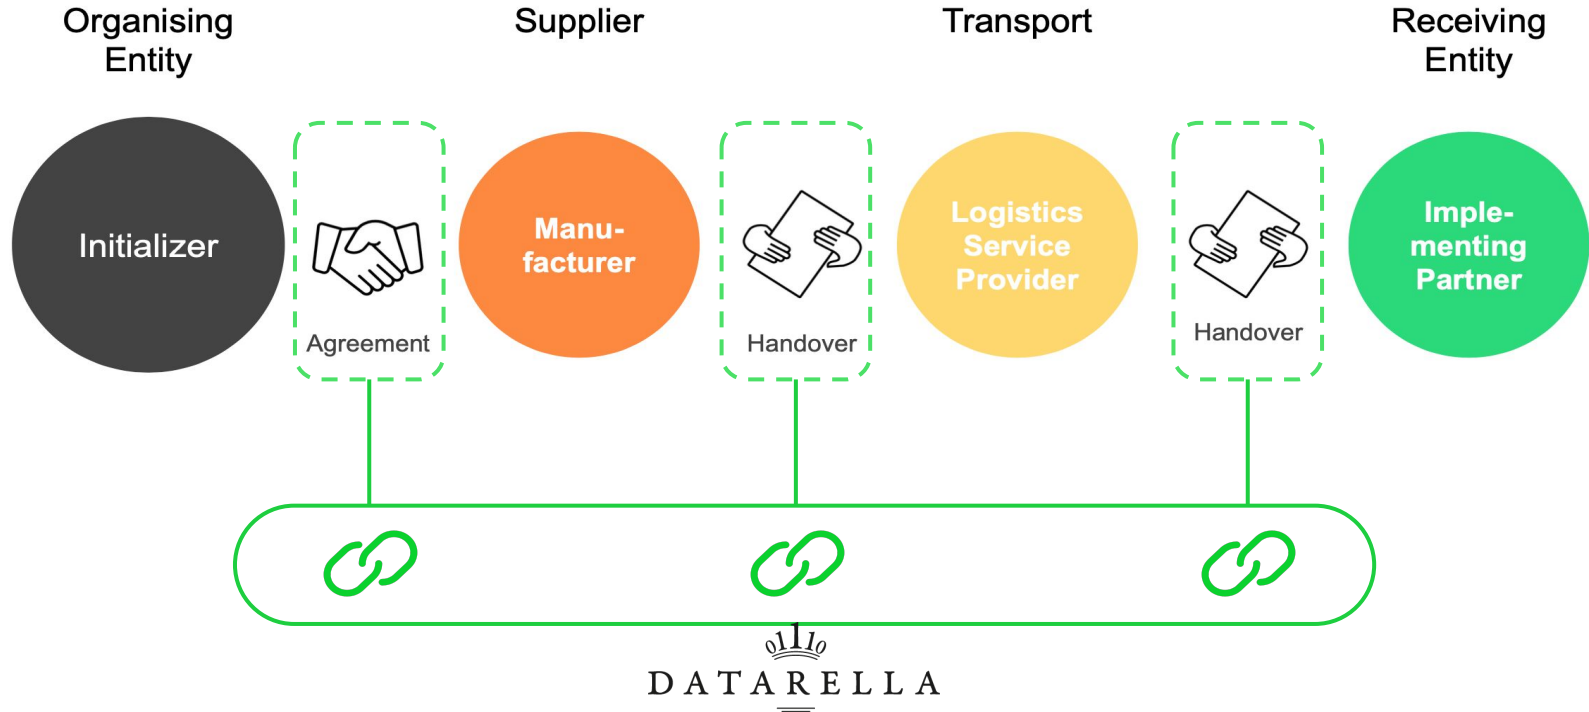

“We believe that real-time information about custodianship and accountability will improve trust for key actors in the supply chain.”

TRACK & TRUST

A Blockchain-Based Tracking Solution
for Supply Chains

Humanitarian Supply Chain Flow

Key Features

Tracking Accountability

See where the shipment currently is

Handover documentation

Blockchain-based transaction integrity

Offline Functionality

Satellite infrastructure for use in areas without internet

Use Case Agnostic

Track & Trust can be adapted to any supply chain

Humanitarian Organizations

TRACK
& TRUST

AgriFood Supply Chain

Wine Supply Chain

Aquaculture Supply Chain

Results from Pilot Implementations

Goal: Perform a test through all processes of Track & Trust

Takeaways:

- Smooth onboarding process
- Little-to-Medium changes required to fully support their business-cases
 - specify T&T for a more local use
- The product would increase transparency for their supply chains
- Potential improvements:
 - Integration of ERP-Systems
 - Partial refusal of shipment

We are happy to see that different companies from different business cases successfully tested Track & Trust and consider it as a great option to increase transparency in their supply chain.

Product Roadmap

Finalizing Key Features

- Implement feedback from pilot stage
- Improve stability
- Release new version of the T&T app

Kick-Off Offline Functionality

- Start Project with offline functionality
- Cryptocurrency-based incentive model
- Preparation of hardware

Pilot Test Offline Functionality

- Continuous Improvements
- Testing of Offline Functionality
- Preparation for commercial phase

Business Roadmap

Build

- Optimization
- Critical Design Review
- Optimize Track & Trust for a Pilot

Pilot

- Pilot Setup Phase
- Install infrastructure
- On-Site-Acceptance Test
- Pilot operations phase
- Final Review

Expand

- Expand pilot to a productive system
- Enrolling a second network
- Continuous marketing and sales

Business Model

of Installed Mesh Networks and Trucks

- Revenues are mainly driven by volume and pricing
- Volume for T&T is dependent on the number of installed mesh networks and trucks
- We plan a continuous steady growth

What we are looking for

New Customers and new Businesses

Track and Trust is use case agnostic. We would be happy to talk to interested companies and organizations to implement a solution for their new use case.

Partners with Innovative Technologies

Track and Trust is open to include innovative technologies that improves the user experience or adds new functionalities

Are you ready for blockchain?

Vytautas Černiauskas, CIVITTA

**ARE YOU READY FOR BLOCKCHAIN
AND DO YOU NEED IT?**

CIVITTA

- » In which sectors blockchain has the highest potential?
- » Overview of the 3 top sectors for blockchain application
- » How do you know if you should use blockchain?

The impact of
blockchain is
highest in the
**markets, where
there are/is...**

... A common interest

... Flows of information with no sole owner

... Need of getting rid of a trusted third party
or intermediary

... Contractual relationship

... If This Then That logic

... Digital assets transactions

... Immutable, secure and/or transparent
action logs

\ WE USED A COMPLEX APPROACH TO DETERMINE WHICH SECTORS ARE THE MOST PROMISING FOR BLOCKCHAIN IMPLEMENTATION BY SMES

DESK RESEARCH

- **Sectors identification**
- **Criteria selection**
- Desk criteria assessment
- Use-cases collecting

EXPERTS INTERVIEWS

- **Methodology verification**
- **Experts criteria assessment**
- Expert insights' collecting

FINDINGS VERIFICATION

- **Verification of research results** with SMEs from Top-3 sectors

\ WHAT ECONOMY SECTORS WERE IDENTIFIED?

AGRICULTURE

WHOLESALE AND RETAIL

EDUCATION

**MINING AND
QUARRYING**

**TRANSPORTATION AND
STORAGE**

**FINANCE AND INSURANCE
(FINTECH)**

MANUFACTURING

**MEDIA, ARTS AND
ENTERTAINMENT**

REAL ESTATE ACTIVITIES

**UTILITIES AND ENERGY
SUPPLY**

**INFORMATION AND
COMMUNICATION**

OTHER SERVICES

CONSTRUCTION

**HEALTHCARE AND
MEDICINE**

CHARITY AND NON-PROFIT

Sectors identified based on: 1. United Nations Statistics Division "International standard industrial classification of all economic activities (ISIC)," rev. 4. Available: <https://bit.ly/3f1XGng>; 2. Eurostat, "Statistical classification of economic activities in the European Community (NACE)," rev. 2. Available: <https://bit.ly/3cF7aDf>

\ WE USED 7 CRITERIA TO ASSESS THE POTENTIAL OF BLOCKCHAIN IMPLEMENTATION BY SMES

-----QUANTITATIVE-----

SHARE OF VALUE ADDED BY SMES

NUMBER OF SMES

-----QUALITATIVE-----

MATURITY LEVEL

LEGISLATIVE AND REGULATORY BARRIERS

LEVEL OF BLOCKCHAIN IMPACT

LEVEL OF BLOCKCHAIN SOLUTIONS FEASIBILITY

SOLUTIONS VARIABILITY

RANKING RESULTS: WHOLESALE AND RETAIL, FINTECH AND ICT ARE THE TOP-3 MOST PROMISING SECTORS FOR BLOCKCHAIN-BASED SOLUTIONS IMPLEMENTATION BY SMES

SECTORS RANKING RESULTS

Wholesale & Retail	1
Fintech	2
Information and Communication	3
Transportation and Storage	4
Media, Arts and Entertainment	5
Real Estate Activities	6
Other Services	7
Healthcare	8
Agriculture	9
Manufacturing	10
Education	11
Charity and Non-profit	12
Utilities and Energy Supply	13
Construction	14
Mining and Quarrying	15

TOP-3 SECTORS

\ WHOLESALE AND RETAIL ARE HIGHLY PROMISING FOR BLOCKCHAIN ADOPTION DUE TO THE HIGH LEVEL OF FEASIBILITY AND TECHNOLOGY MATURITY

TOP #1: WHOLESALE & RETAIL

SMEs in the industry

Share of SMEs in total sector's value added

Level of legislative and regulatory independence

Blockchain solutions feasibility

Blockchain impact on the industry

Maturity of the technology

COMPLEX NATURE OF MARKET ACTORS INTERACTION AS WELL AS THE ACCESSIBILITY OF WELL-DEVELOPED SOLUTIONS DRIVE THE MARKET TO BLOCKCHAIN ADOPTION

DRIVERS

There is a **need for increased efficiency** and speed in retail because it is a highly competitive market

The international trade and **retail industry scenario is transforming rapidly**, e. g. growing online market

The requirements for environmental friendliness and **purity of origin of goods** and services are increasing

The **compulsory labeling legislation** and supply chain security legislation are being developed

Technological giants actively take part in the development of blockchain-based **supply chain** solutions

BARRIERS

The challenge is **how to attract suppliers** to the blockchain-based supply chain management system and convince them of the benefits of transparent operations

Unavailability of infrastructure: to create an effective supply chain tracking system a unified approach to storing data and wide use of IoT-sensors are needed

BLOCKCHAIN-BASED SUPPLY CHAINS AND GOODS PROVENANCE SYSTEMS MAY BRING HIGHER TRANSPARENCY AND EFFICIENCY TO THE WHOLESALE AND RETAIL MARKET

TOP #1: WHOLESALE & RETAIL

EXPERTS OPINION

Ivana Todorovic, COO at Balkaneum:

"Since people want to know where products are coming from, blockchain enables great opportunities **for tracking goods & counterfeiting prevention**. In addition, synergy with IoT opens up additional opportunities for blockchain adopters in the retail and transportation sectors"

WHO CAN USE IT?

- Wholesale stores
- Suppliers
- Retailers
- Warehouses
- Distributors
- Other supply-chains actors

SELECTED SOLUTIONS FOR SMES

SUPPLY CHAIN MANAGEMENT

CUSTOMERS IDENTIFICATION

DIGITAL ADVERTISING AND MERCHANDISING

PROOF OF GOODS PROVENANCE

SMART LOYALTY

\ FINANCE AND INSURANCE SECTOR IS LEADING THE WAY IN EXPLORING BLOCKCHAIN

TOP #2: FINTECH

SMEs in the industry

Share of SMEs in total sector's value added

Level of legislative and regulatory independence

Blockchain solutions feasibility

Blockchain impact on the industry

Maturity of the technology

\ FINTECH IS THE MOST PREPARED SECTOR FOR SMES TO IMPLEMENT BLOCKCHAIN TECHNOLOGY

DRIVERS

Development of **customer data protect legislations** (e.g., EU's General Data Protection Regulation), as well as fraudsters countering and anti-money laundering programs make blockchain one of the most perspective tools in this direction

Blockchain significantly accelerates transactions, as well as **eliminates intermediaries**, which is also a critical factor for the sector

The **technology is highly advanced** in relation to the variability and development level of solutions that may be implemented in this sector

BARRIERS

Blockchain opportunities in the financial sector are still determined by **high legislative barriers**

The widespread use of blockchain is limited by **the inertia of the sector**: blockchain-based solutions often bring together many market actors, which requires the development of common standards for data storage, processing, and protection

\ THE MOST PROMISING BLOCKCHAIN SOLUTIONS FOR SMES IN FINTECH ARE MOSTLY RELATED TO KYC AND CUSTOMERS IDENTIFICATION

EXPERTS OPINION

Ken Timsit, *managing director at ConsenSys:*

“Mostly, the great potential of blockchain in the Fintech area may be explained by its **ability to reduce time and money wasted by data reconciliations** and **information exchanges** back and forth between industry participants. It also drives the market to the creation of **new business models around digital assets** as a new class of financial products”

WHO CAN USE IT?

- Financial services provider
- Banks
- Insurance companies
- Fintech companies

SELECTED SOLUTIONS FOR SMES

KYC AND IDENTITY DATA MANAGEMENT

DIGITAL USERS IDENTIFICATION

RECORD SHARING AND STORAGE

PEER-TO-PEER INSURANCE PLATFORM

\ STRONG POSITIONS IN IMPACT AND FEASIBILITY MAKE TECHNOLOGY ADOPTION GROW RAPIDLY IN ICT SECTOR

TOP #3: ICT

SMEs in the industry

Share of SMEs in total sector's value added

Level of legislative and regulatory independence

Blockchain solutions feasibility

Blockchain impact on the industry

Maturity of the technology

\ ICT MAY EASILY ADOPT BLOCKCHAIN DUE TO THE HIGHEST LEVEL OF NEW TECHNOLOGIES ADOPTION AND SAVVY TECH BACKGROUND OF THE SECTOR

DRIVERS

Increasing **security and privacy of data** - blockchain provides better data access control in terms of storage and communication

Reducing costs of storing data and extending data storage – users can store the traditional cloud 300 times over and rent out their excess storage capacity, Airbnb-style

Fast new technologies adoption is inherent for the ICT sector since it has a savvy tech background and has the most digital approach among all industries

BARRIERS

The challenge is to provide a guarantee of **confidentiality of information** as blockchain is also subject to hackers in case the private key is stolen or lost

There is a **lower processing speed** with blockchain as validation from all participants is required for a modification to be made in the data

\ DATA-STORAGE AND TRANSFERRING AS WELL AS INFORMATION SECURITY-RELATED ARE OF THE TOP BLOCKCHAIN-BASED SOLUTIONS FOR ICT

EXPERTS OPINION

Ivana Todorovic, COO at Balkaneum:

“Fast new technologies adoption is inherent for the ICT sector since it has a **savvy tech background** and has the most digital approach among all industries. ICT companies are digital and fastly adopt new technologies, so they create **new ways of data management with blockchain**”

\ TO HELP SMES UNDERSTAND IF THEY MAY IMPLEMENT BLOCKCHAIN SOLUTIONS WE HAVE DEVELOPED "DO YOU NEED BLOCKCHAIN?" SURVEY

THIS IS HOW IT LOOKS LIKE

The screenshot shows a survey titled "Do you need blockchain?" with a red header. Below the title, there is a question: "12 → Do the participants (competitors, suppliers, business partners, regulators, etc.) know and trust each other? *". There are two radio button options: "Y Yes" and "N No". At the bottom right, there is a progress bar indicating "42% completed".

Infidia

Seamless Invoice Verification for Invoice Financing

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 828853

Invoice financing

short-term crediting method
against unpaid invoices, that helps
businesses to improve cash flow.

Who needs Invoice Financing?

Small
Manufacturers

Logistics
Companies

Distributors/
Importers

...with 15-60 days
payment terms

Problem

Due to **LACK OF TRUST** invoice financing is accessible only to a few.

1

Fraudulent invoices
*450 million/year
globally

2

Lack of credit
history data

3

High costs and
Extensive due
diligence process

4

Lack of Debt
confirmation by
Borrower's client

The Infidia Solution

Enabling SEAMLESS FINANCING and OPTIMIZING business processes.

SMEs

Financing & Light ERP

Infidia Platform

Invoice financing fees

Banks & Lenders

Scalable loans & New Clients

How it Works

Infidia Order Management
records all borrower's
transactions

Borrower request
financing

Lender reviews the
records and
approves the loan

Ideal Customer Profile

SMEs in Manufacturing, distribution & wholesale

B2B (for profit) founded
between 2010 and 2018,

Revenue below
€2 million per year

Up to 100
employees.

Invoice due date
over 15 days

Defining the ideal customer is the result of
BlockStart mentorship in the Prototype phase.

Competitive Landscape

We are the only automated solution specialized for micro transactions, in manufacturing, wholesale and distribution!

Automated solutions

FOXCONN

HSBC

ING

Smaller transactions (SMEs friendly)

Large transactions (auto, oil, shipping)

Service-based

Why we are better

We are the only solution that also records processes preceding invoice creation.

ADDED VALUE

LOWER RISK

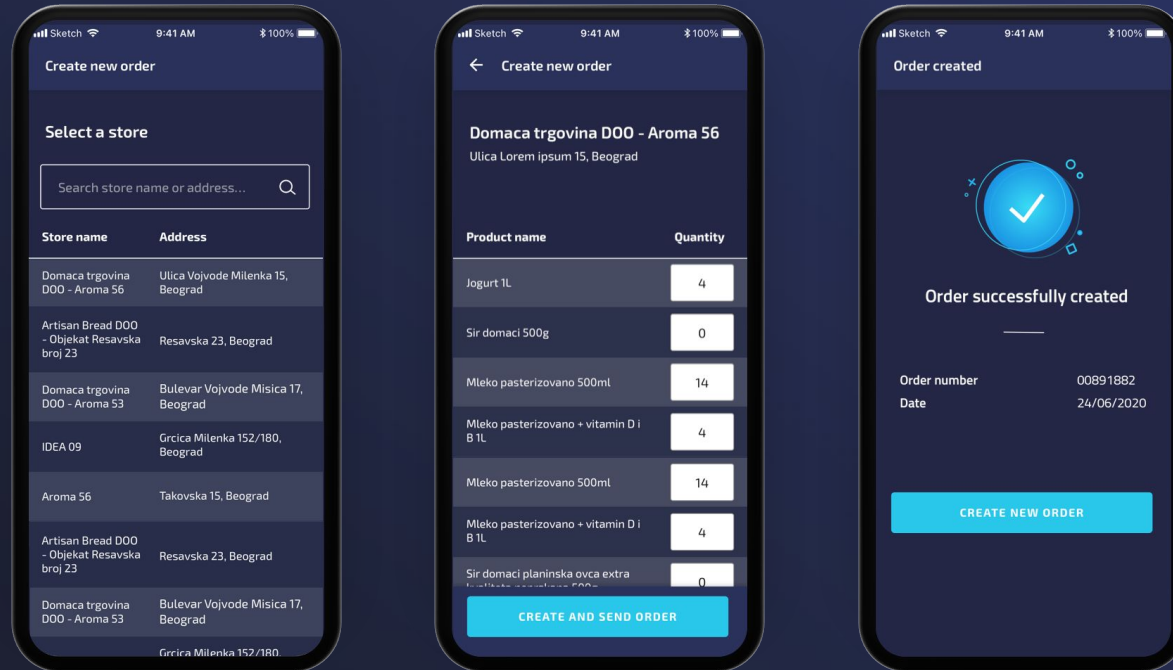

SCALABILITY

EXPERIENCE

Infidia Order App is a **sales tool** that increase salesmen productivity + registers orders in blockchain

Our solution is built on **c.rda**
the technological infrastructure of **r3**. shared by
more than 300+ financial institutions worldwide.

Last-mile delivery monitoring

Problem

Spoiled Food in Amazon Fresh

submitted 4 years ago by AudioFurder

Not so great Walmart grocery delivery review.

minutes. They arrived an hour later with all the groceries. I'm not sure if things were properly kept cold during this time since the milk was spoiled when we tried some last night. They arrived in a cooler, but who knows if they were kept in the cooler the whole time they were in the van. They were only slightly cool to the touch when they arrived. The yogurt and other cold dairy will have to be thrown out also as I'm not risking food poisoning during my vacation time. We ended up going to Walmart last night and bought the rest of our groceries and realized after that the dairy was spoiled. I hate

Problem: High risk

Listeria-tainted sausage deaths in Germany lead to calls for better consumer protection

A public holiday likely contributed to a delay in the spread of information regarding a recall of bacteria-tainted meat in Germany. Advocacy group Foodwatch has urged new action to inform and protect consumers.

f t w i e

The advocacy group Foodwatch called on Saturday for more consumer protection measures after sausages containing listeria bacteria were linked to two deaths and potentially several cases of illness in Germany.

Speaking to the dpa news agency, the organization also criticized the way the problem was dealt with by authorities in the state of Hesse, where the company producing the sausages is based. The group urged officials to provide more comprehensive information on the affected products and where they were sold.

Authorities said there are now 37 cases of illness in Hesse possibly connected with the tainted goods, made by the company Wilke.

Two elderly people in southern Hesse are also suspected to have died from eating the meat contaminated with the listeria bacteria, which are most dangerous to those with weak immune systems, such as the aged, newborns, people with chronic illnesses and pregnant women and their unborn babies.

Sixth person dies from listeria outbreak linked to NHS sandwiches

Public Health England says latest death was one of nine cases previously confirmed

▲ Microscopic view of *Listeria monocytogenes*, the causative agent of the listeriosis bacterial infection. Photograph: StockTrek/Getty

A sixth person has died after eating pre-packaged sandwiches and salads linked to a listeria outbreak, Public Health England (PHE) has said.

The latest death was one of the nine cases previously confirmed and PHE said there had been no new cases linked to the outbreak.

The patient acquired listeriosis from The Good Food Chain products while at Western Sussex hospitals NHS foundation trust, PHE said.

The other deaths occurred at four hospital trusts - two at Manchester

- **Customer trust, confidence & satisfaction** results in loyalty

Market: Why now?

Online Grocery Market Forecast

Billions (\$)

People who had purchased groceries online

Top US Destinations For Online Grocery

- **AAGR of 49%**
- **300% market share growth of SMBs**

Revenue Model

- **Monthly subscription for each sensor unit**
- **Monthly subscription** for platform based on number of deliveries (starting at €100/month)
- **Additional revenue through white-label features**

Competition and Alternatives

→ Established corporations

Not usable without IT department,
not suitable for SMBs, no data
verifiability, no visibility to
end-consumers

→ Blockchain platforms

No solutions available for
real-time monitoring, high risks
with own blockchain ledger, high
complexity of implementation

→ Start-up solutions

No real-time monitoring without
connection to phone,
implementation requires training,
no visibility to end-consumers
