ComeTogether

ComeTogether provides infrastructure for event ticketing, fraud and scalping prevention along with secondary market revenue management. EOSIO blockchain ticketing engine controls the entire lifecycle of a ticket.

Developed **BackTogether** – COVID-19 access control Passport when events industry shut down.

Functionality has been integrated into ComeTogether, adding a health component to the tickets, to enable safe **restart of live events**.

The Prototype

ComeTogether has developed the following prototype

ComeTogether and BackTogether

Product:
Created a QR code scanner native app for ComeTogether (multiple scanners synchronized with each other over 2g internet - MQTT protocol) and added new features (e.g. ID scanning, photo display on QR scan) on BackTogether.

Business development:
Published three press releases and demonstrated BackTogether solution in the Greek national TV. Secured a new contract with Tickets For Good. Created 'Mazi.live' initiative to bring back live events in Greece. Got selected by Qatar SportsTech accelerator to provide innovative solutions for major international sports events, such as the FIFA World Cup 2022.

Market validation:
Saw significant demand for both of our technological solutions that being used combined can restart the live events (Greece, UK, Bulgaria, Qatar)
