

Tech Platform providing full stack agri-insurance solutions

Luxembourg
Established in 2019

The company

IBISA is a tech platform for insurance actors to unlock the agriculture microinsurance market worldwide. IBISA designs innovative weather-based index products and provides a platform to distribute and manage them in a cost-efficient and automated way using Earth Observation and blockchain technologies.

The Prototype

IBISA has developed the following prototype:

Minorka

Minorka is an extension of IBISA, a platform for SMEs to easily identify, request and use actionable data for the businesses. It's built on top of IBISA's loss assessment proven platform. Transactions are recorded in blockchain for traceability and transparency, adding additional value to the data.

Minorka has the potential to increase adoption and understanding of the benefits of Earth Observation data for SMEs.

The goal of the BlockStart project was to create a platform on top of IBISA crowdsourced solution, to allow external companies to request remote and distributed loss assessment.

This makes our solution usable as a decentralized crop monitoring oracle for other businesses.

Minorka prototype is an Ethereum Dapp that can trigger the IBISA Earth Observation platform directly.
