

mylime

Blockchain-based platform to notarize product's information and media contents.

Modena and Cremona, Italy
2018

The company

MyLime supplies a platform for the registration of product meaningful information, stored in blockchain. The developed platform collects data and related media contents (audio, video, photo, documents) from its whole life cycle, thanks to the integration of a specific sensor in the product. Data visualization and updating are possible through interfaces for suppliers, manufacturer, dealers and app for the product owner.

The Prototype

MyLime has developed the following prototype

MyLime

During the prototype stage, myLime developed a new and easier web interface for the company's users.

All the UI and UX were redefined and there was the creation of different pages in order to reach in an easier and faster way the most important informations: tag associated with the product/asset, list of assets, events connected to each asset, list of owners associated to each assets. In every different page mentioned before, the entire workflow was standardized and made more perceivable.
